

# Mamta Swami

UX Designer

I'm a Google Certified UX Designer with 5 months of the Internship experience. From my learning, I have created a few major projects and many minor projects. I liked wireframing and prototyping the most. I want to join an organization that helps me in my next level of learning and career path.

Present

UnoTag

UI/UX Design Intern

- Designed the “Dhan Utsav” project from scratch, I conducted user research and competition analysis, Based on my research I prepared wireframes and prototypes. After group discussion and changes, I delivered High Fidelity Designs.
- Integrated a module called “Reviews of Evolve” into an e-commerce project. Where I followed the existing design system and worked with other designers.
- Designed a landing page for “Mok.One” based on PRD, It was completely different from any static site. I used interactive emojis and illustrations along with the text.
- For users of “Mok.One” I designed a dashboard, In which we added many features like sales reports, reward points, API integration, and more.

## Projects

July 2022

World Explorer

[Wireframes](#)[High Fidelity Designs](#)[Case Study](#)

- Nowadays millions of people travel around the world, and it's difficult to find good places with safe and honest reviews. “World Explorer” makes this possible to find and filter tourist locations and open adventure to this world.
- So I designed an application for explorers of this world. Where they can share their experience of a particular place along with photos or videos. Explorers can share the story of their journey and create memory albums. Also, a traveler can host another traveler to enjoy a new culture.

Dhan Utsav

[High Fidelity Designs](#)

- On every purchase of an electric product, the electrician can get a reward. The electrician can apply a coupon code from the packaging of the product and will get reward points. Later from that reward points user will be able to redeem money in his bank account.
- I completed this project from scratch, I have done user research, create a user persona, wireframing and prototyping, LFD, and HFD.
